SUMMARY

Six years in Amazon fulfillment operations, including two Process Assistant roles in floor leadership and SOX audit compliance, built a practical understanding that a control only works when people follow it and someone can prove it — weekly SOX compliance went from the 60s to 99%+ within a month under that approach, and stayed there.

Now applying that discipline to hands-on GRC, Microsoft 365, and Windows security projects mapped to NIST SP 800-53, NIST SP 800-171, and PCI DSS, while finishing a B.S. in Cybersecurity and Information Assurance at WGU (expected January 2028).

SKILLS

- **Governance, risk & compliance:** Risk registers, control matrices, NIST SP 800-53 to PCI DSS 4.0.1 crosswalk, audit evidence, POA&M tracking, vendor risk assessment, access reviews, DISA STIG baselines and SCAP benchmark scanning, SOX audit compliance
- **IT & Microsoft 365:** Microsoft 365 and SharePoint Online, Microsoft Entra ID, RBAC, least privilege, Conditional Access, Windows 10/11 and Server 2022, Hyper-V, Active Directory (fundamentals)
- **Scripting & web:** PowerShell, Python (basic), JavaScript, HTML, CSS, Git and GitHub, Playwright testing, Cloudflare Pages
- **Operations & leadership:** Start-up meetings, floor staffing, coaching, training, SOPs and standard work, 5S, quality metrics (DPMO), inventory counts and audits

PROFESSIONAL EXPERIENCE

Amazon Fulfillment Centers, Orlando, FL (MCO1) and Knoxville, TN (TYS1) *Oct 2020 – Present*

Fulfillment Associate, Pick and Pack (MCO1) *May 2024 – Present*

- Pick and pack customer orders across singles, multi-item, and SLAM stations.

Quality Process Assistant, New Site Launch (TYS1) *Jul 2023 – Apr 2024*

- Raised weekly SOX audit compliance from about 63–70% to 99%+ within one month, and sustained it, through structured tracking and shift-by-shift associate training.
- Analyzed ICQA error trends to cut DPMO from about 37k to 10k, and wrote exception-handling SOPs that reduced unresolved inventory exceptions from 50+ pods across four floors to 1–2 per floor.
- Conducted daily floor audits to catch and report inventory discrepancies to site leadership, and built a shared documentation resource the quality team used daily.

Stow Process Assistant (MCO1) *Jun 2021 – Jul 2023*

- Led daily start-ups for a team of 60–80 associates, staffed the floor, and coached on quality and productivity; the team ranked #1 in productivity among the building's departments.
- Built and developed a team of water spiders and problem solvers to keep stations supplied with work, fix defects, and track time-sensitive inventory.
- Kept stow DPMO at 5–7k, below the site's 10k limit and contributing to a top-3-of-90+ network ranking, while mentoring newly promoted PAs.

Fulfillment Associate (MCO1) *Oct 2020 – Jun 2021*

- Worked stow, inbound dock, and problem solve; as a Process Guide, helped Area Managers and PAs with audits, floor readiness, and headcount moves.

Massey Services, Kissimmee, FL *Feb 2017 – Aug 2020*

Pest Prevention Specialist and Customer Support

- Managed a recurring base of 215–280 clients, resolving service issues directly and maintaining the regulatory compliance records required for state licensing.

PROJECTS

Code and write-ups: github.com/MgnCoding2020. GRC projects are simulations for fictional organizations.

GRC Security Program: Burn and Churn Coffee (+ Vendor Risk & IAM Access Review) *2025 – 2026*

- Built a security program for a fictional card-accepting small business: asset inventory, risk register, and an **11-control matrix** mapped to NIST SP 800-53 and crosswalked to PCI DSS 4.0.1.
- Wrote 4 policies, 4 procedures, and 4 incident-response playbooks, plus an **evidence pack with Python checks** for privileged-access and incident-log exceptions, tracked in a POA&M.
- Assessed a simulated payroll vendor (inherent risk High, 4 findings, approved with conditions at Moderate residual risk) and ran a **quarterly access review across 5 business systems**.

STIG / NIST SP 800-171 Hardening Lab *2025*

- Ran a SCAP benchmark scan (SCAP Compliance Checker, STIG Viewer, DISA Windows 10 STIG V3R7) against a pre-hardening Windows 10 VM: **225 rules assessed, 137 open findings**, about 35% baseline compliance.
- Separately hand-implemented and validated **4 Windows 10 STIG controls** in the same problem areas the scan flagged — firewall, inbound traffic restriction, firewall logging, account lockout — mapped to NIST SP 800-171, with PowerShell for repeatable enforcement and evidence export.

HomeEDR: Endpoint Monitoring and Governance *2025 – 2026*

- Wrote **scheduled PowerShell monitoring** that baselines a system and reports drift in services, scheduled tasks, and startup persistence, with reports sanitized before archiving.
- Mapped the monitoring to NIST SP 800-53 with a generated evidence pack (control-evidence doc, POA&M, risk register) and a **GitHub Action that regenerates the evidence automatically**.
- Grew it into a **20-script PowerShell triage toolkit**, safety-tagged and NIST/CIS-mapped, plus a 13-document incident-response playbook series covering Sysmon analysis, IOC handling, and patch prioritization.

Workspace: SharePoint-style intranet platform *2026*

- Built a data-driven intranet in vanilla JavaScript (**~4,700 lines**) with one provider interface and three interchangeable backends: in-memory, browser storage, and a live SharePoint tenant.
- Connected it to and verified against a **live Microsoft 365 tenant** (Sept 2026, before the trial subscription lapsed) via MSAL with no client secret — SharePoint REST reads/writes, a document library, and PowerShell provisioning scripts with a dry-run mode.
- Found and fixed a **stored XSS vulnerability** across 60 unsafe HTML-insertion points app-wide, verified across 6 surfaces; backed by an automated Playwright suite now at **454 passing checks**.

EDUCATION AND CERTIFICATIONS

- **Western Governors University**, B.S. Cybersecurity and Information Assurance (in progress, expected January 2028)
- **University of Central Florida**, Full Stack Web Development Bootcamp Certificate
- **Certifications:** CompTIA Security+, Network+, A+ (2025) | ITIL 4 Foundation (2026)
